

Mitsubishi Evo 7,8 & 9 manifold – MM01

Description:

Our new MM01 inlet manifold has been designed to get the ultimate power from the last range of Mitsubishi Evo engines.

The manifold can accommodate up to 8 injectors and it is ideal for high power engines that are running either 4 individual throttle bodies or a large single throttle body.

When used in conjunction with our turbo plenum you will see excellent fuel mixing and an increase in power over the standard plenum.

The prototype used with a Jenvey plenum and 70mm diffuser is giving 730 bhp up from 650 on the standard manifold.

The manifolds are supplied with only the rearmost injector positions machined.

Prices (do not include VAT)

MM01 manifold	£220
Fuel rails	£48 each
Fuel rail mounts	£12 each
